

IN THE SPECIFICATION:

Replace the paragraph at page 7, lines 13-17 with the following amended paragraph:

With reference to Figure 6, hasp 70 has a conventional ring 72 at one end. The opposite end of the hasp is bifurcated into two branches 74, 76. Each branch has a hollow keyway having a longitudinal axis which align with one another and with the axis of the opening in staple 80 when the branches straddle the staple as illustrated. A key ~~78~~ 82 can be used to connect the hasp to the staple.

Replace the paragraph beginning at line 18 of page 7 and ending at line 2 of page 8 with the following revised paragraph:

Like key 60, both ends of key 82 are enlarged to prevent the key from separating from the keyways and the opening in the staple. The upper end is enlarged by a head 84 while the lower end is enlarged by a removable cylindrical fastener 86. Both keys ~~60, 84~~ 60, 82 have the same construction as have fasteners 64 and 86.
